[a] Aldimine **1** (1.0 equiv) and ketene silyl acetal **6** (1.5 equiv) were treated with **4e** (10 mol%) in toluene at  $-78^{\circ}\text{C}$  for 24 h. [b] *ee* value of *syn* isomer. [c] *E/Z* = 87:13. [d] *E/Z* = 87:13. [e] *E/Z* = 91:9.

## Bronsted Acid-Catalyzed Direct Aza-Darzens: Synthesis of N-Alkyl cis-Aziridines

### Aza-Darzens Reaction

- Alkylation (**eq 1**) and Homocoupling (**eq 2**) decomposition pathway are slow relative to aziridine ring formation.
- Stoichiometric amount of base generated during the reaction has little effect on the turnover of the reaction.

Amie L. Williams and Jeffrey N. Johnston\* *J. Am. Chem. Soc.* **2004**, *126*, 1612-1613.
