About Amphidinolide T family

- Amphidinolide T1 is a cytotoxic macrolides isolated from the marine flatworm *Amphiscolops* sp, it was characterized by Kobayashi, J. in 2000, the T2 to T5 members were isolated later by the same group in 2001.
- Amphidinolides T1-T5 exhibit modest cytotoxicity against L1210 cells *in vitro* with IC₅₀ values of 18, 10, 7.0, 11, and 12 µg mL⁻¹, respectively.

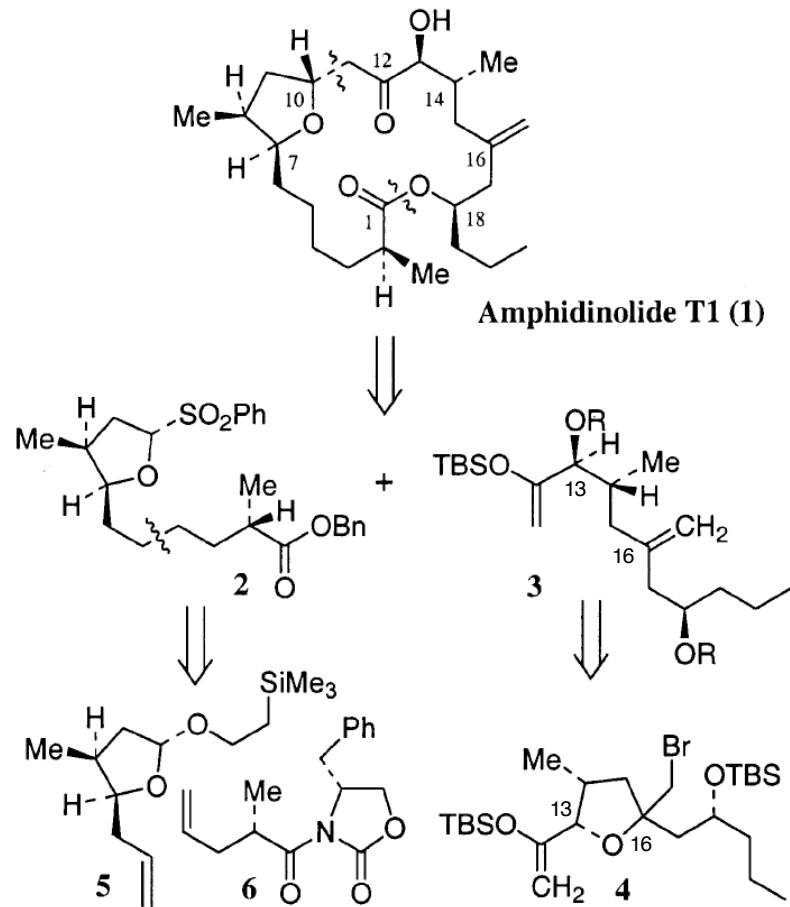

- Similarity on the structures in class T family:
19-member macrocycle ; trisubstituted tetrahydrofuran moiety
a -hydroxy ketone; exocyclic methylene; homoallylic ester

Different Synthesis to the Amphidinolide T Macrocycle

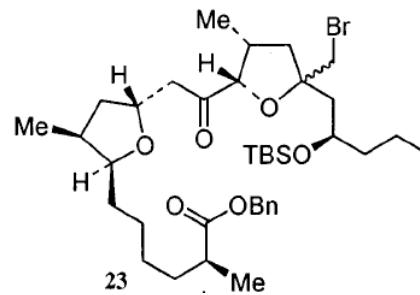

1. Furstner, A.; Aissa, C.; Riveiros, R.; Ragot, J. *Angew. Chem. Inr. Ed.* **2002**, *41*, 4763.
2. Ghosh, A. K.; Liu, C. *J. Am. Chem. Soc.* **2003**, *125*, 2374.
3. Aissa, C.; Riveiros, R.; Ragot, J.; Furstner, A. *J. Am. Chem. Soc.* **2003**, *125*, 15512.
4. Colby, E. A.; O'Brien, K. C.; Jamison, T. F. *J. Am. Chem. Soc.* **2004**, *126*, 998.

Ghosh's Approach to Amphidinolide T1

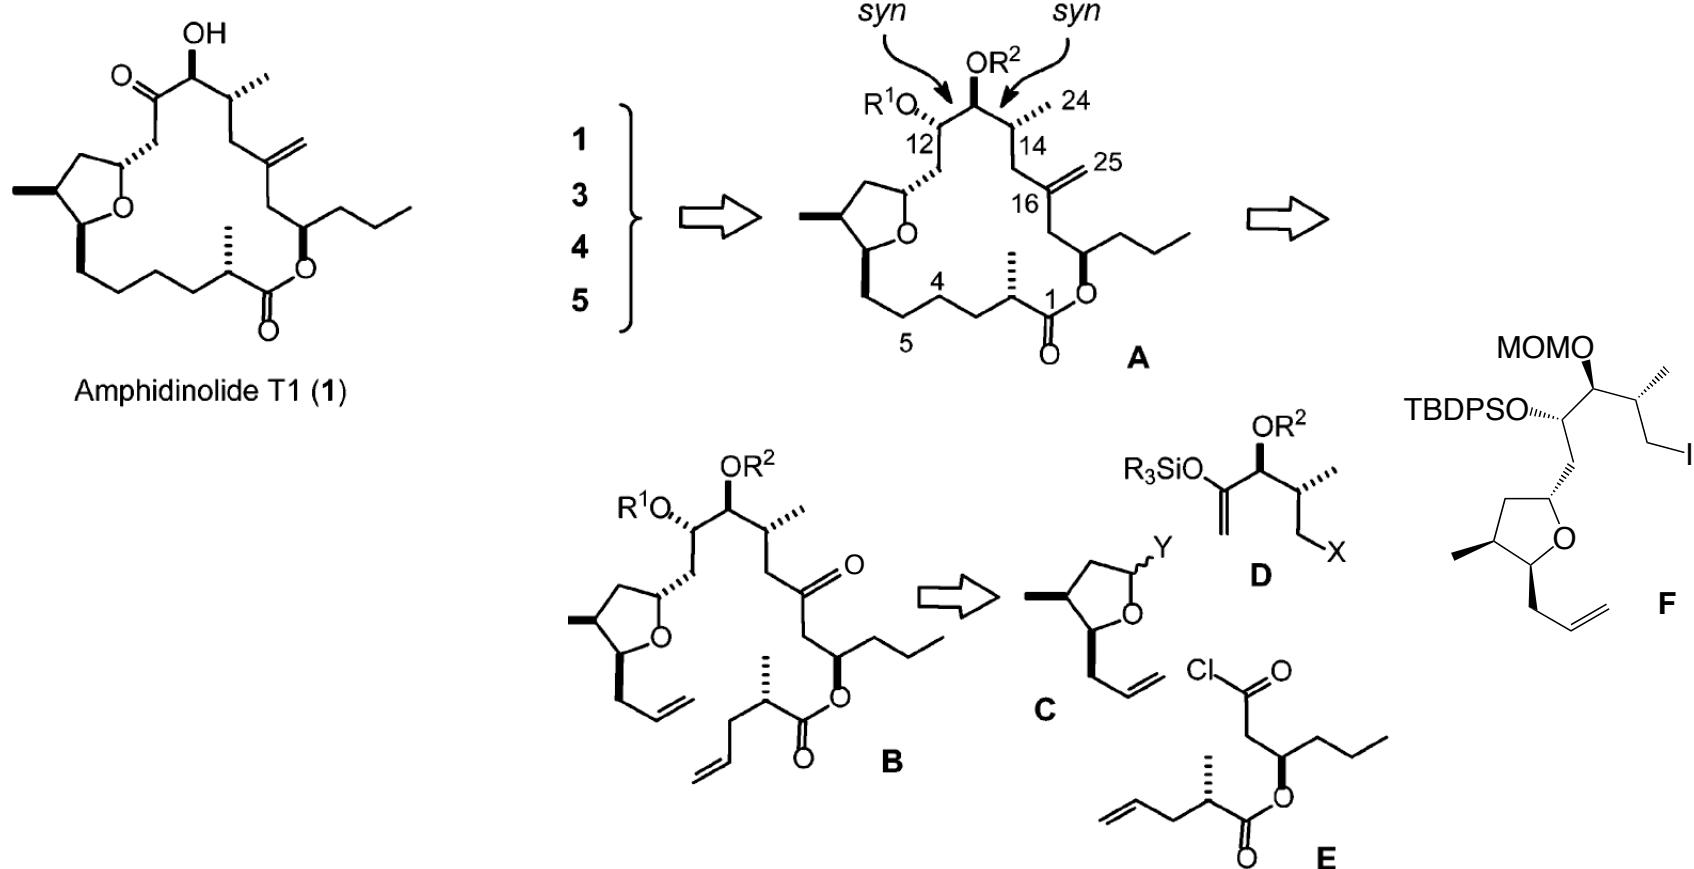

$5 + 6 \rightarrow 2$: Grubb's cross metathesis, 96% yield.

$2 + 4 \rightarrow 1$: (4 is the surrogate of the 3 to protect the C16 methylene and C13 hydroxy.)
a. Oxocarbenium ion-mediated alkylation.

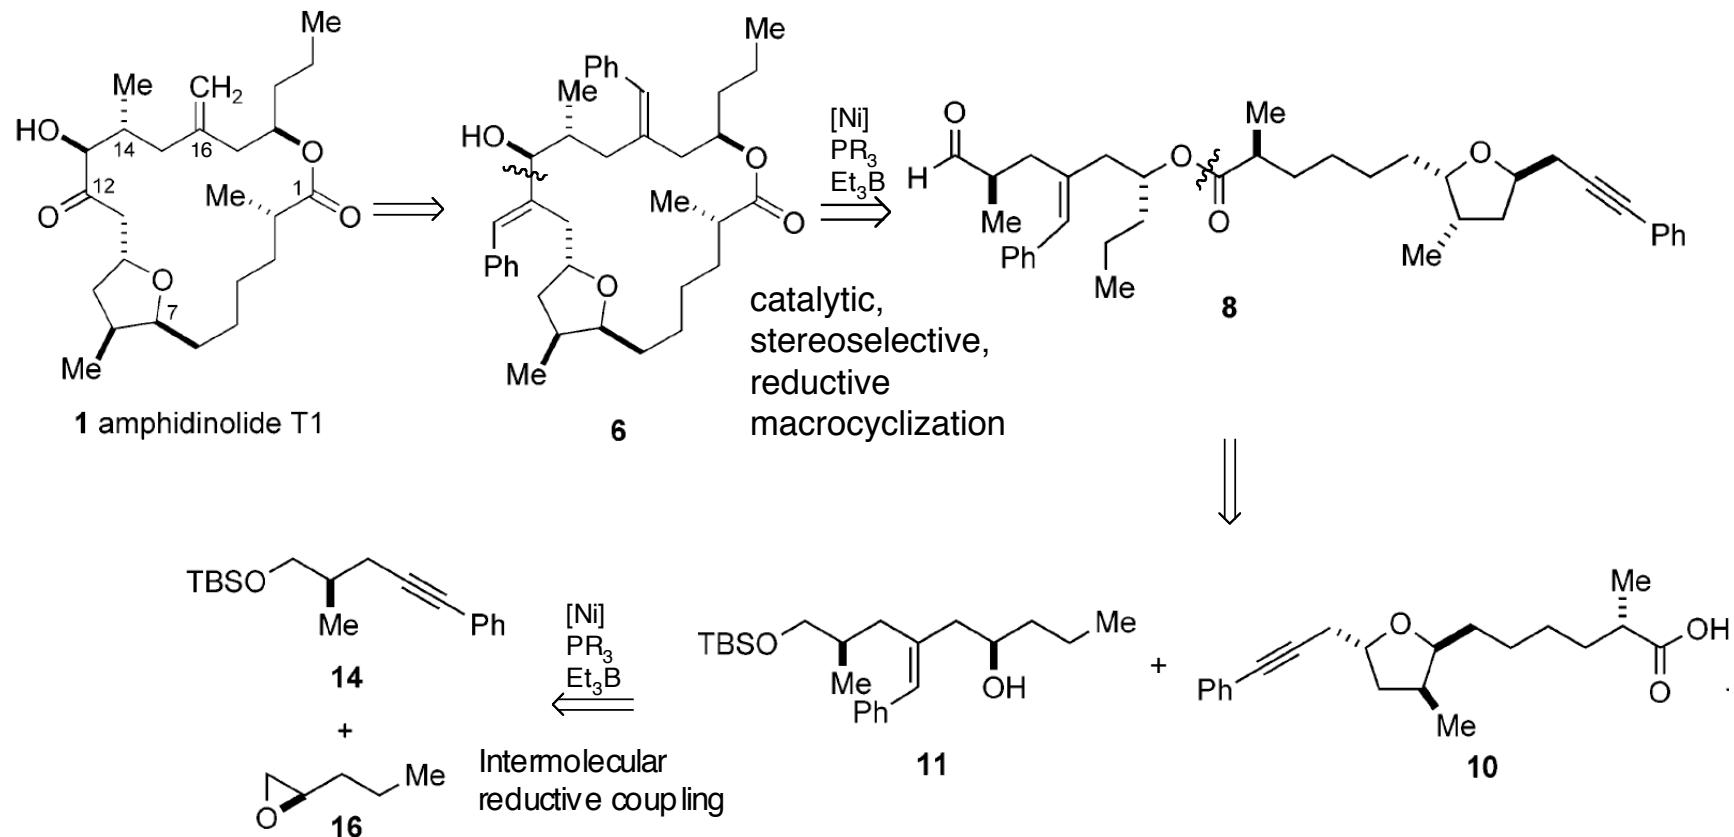

b. Yamagushi lactonization.

Furstner's Approach to Amphidinolides

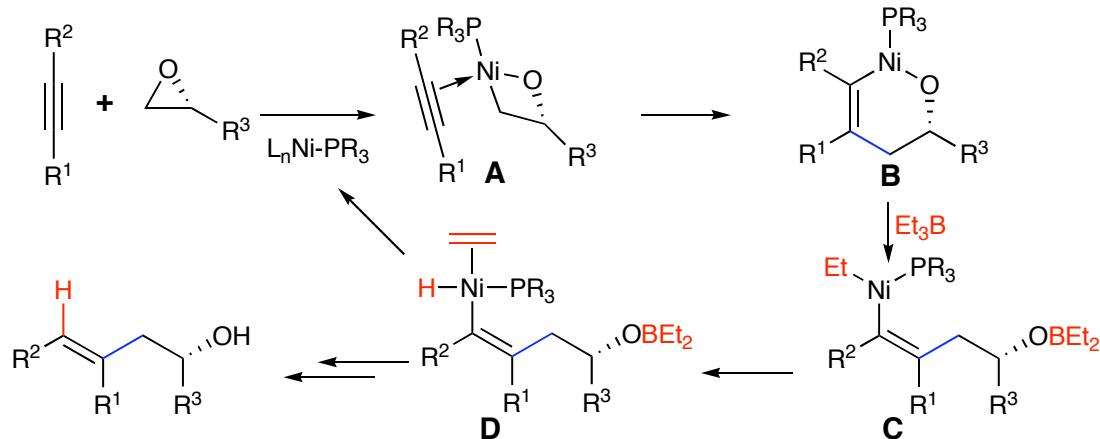

1. C + D → F': Oxocarbenium ion alkylation. Reduction using L-Selectride gave (12*S*), LAH gave (12*R*) configuration.
2. F + E → B': Pd catalyzed Negishi cross coupling.
3. B → A: RCM.

Jamison's Approach to Amphidinolide T1

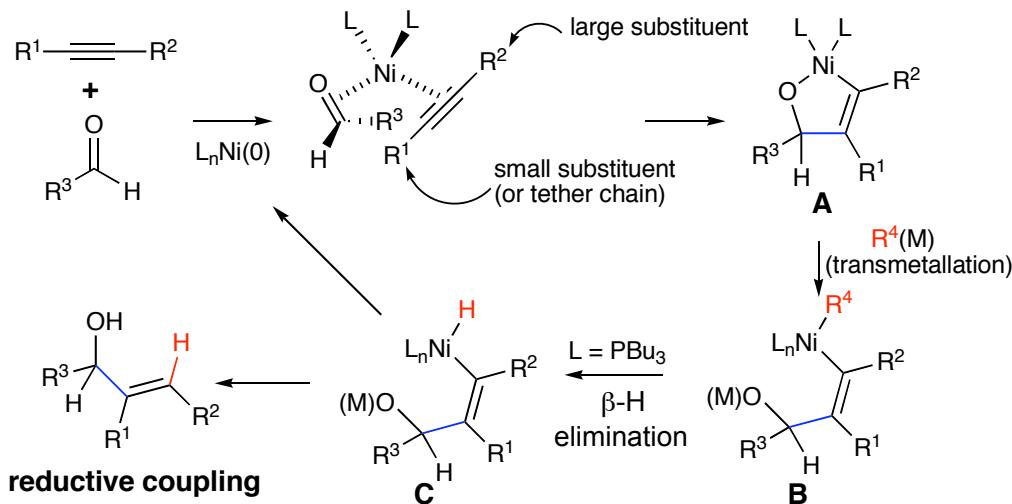

Ni-Catalyzed Alkyne Electrophile Reductive Coupling

◆ Coupling of alkyne with epoxide:

◆ Coupling of alkyne with aldehyde:

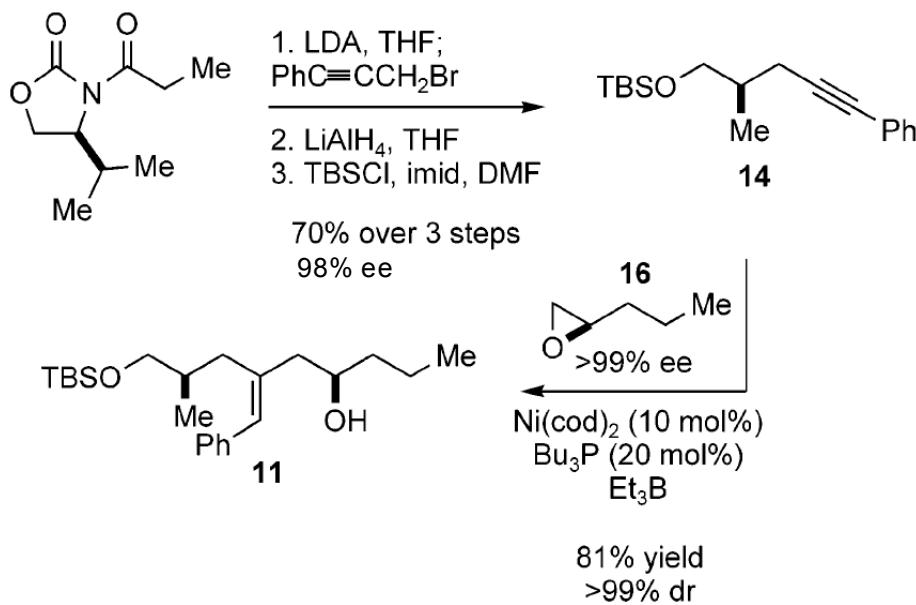

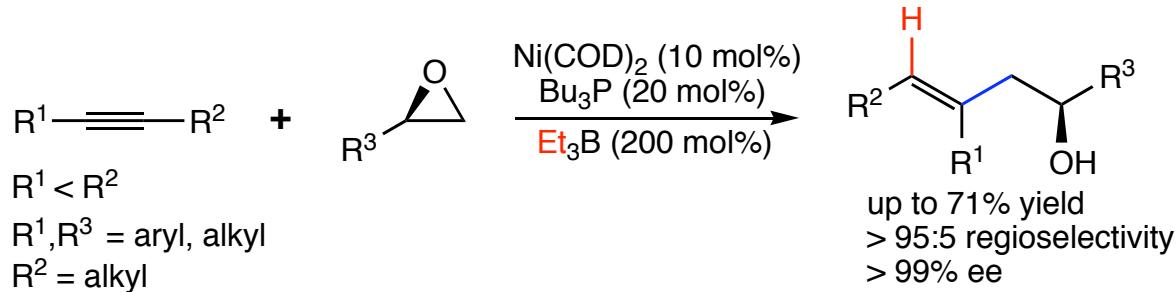

1. Molinaro, C.; Jamison, T. F. *J. Am. Chem. Soc.* **2003**, *125*, 8076.

2. Oblinger, E.; Montgomery, J. *J. Am. Chem. Soc.* **1997**, *119*, 9065.

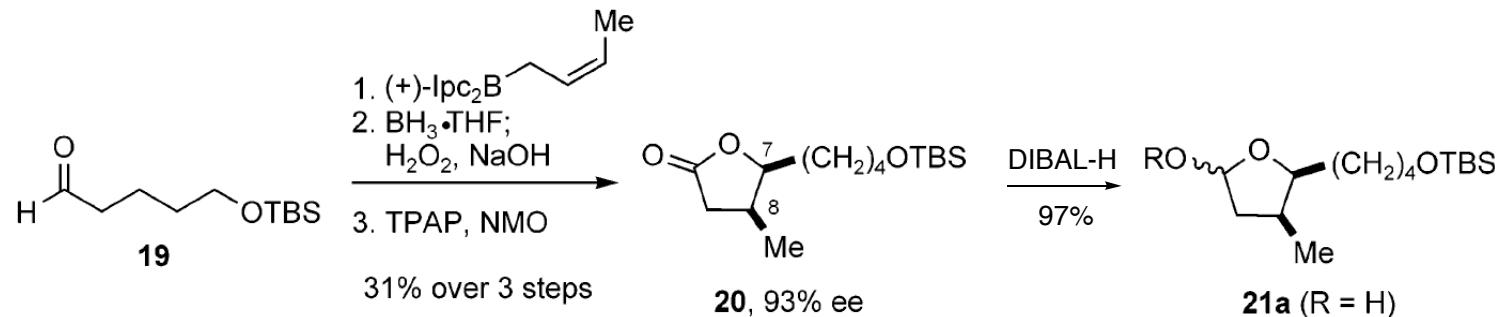

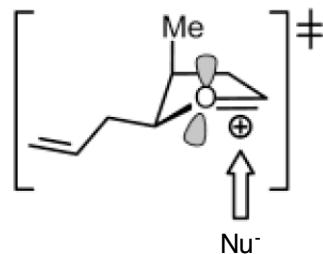

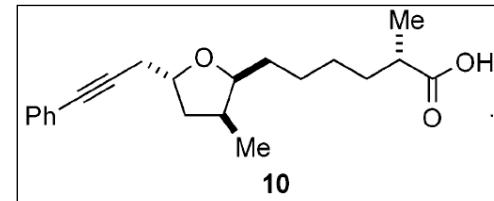

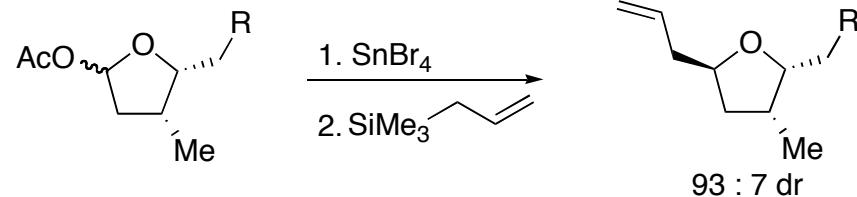

Construction of Fragment 11

Construction of fragment **11** via intermolecular alkyne-epoxide reductive coupling

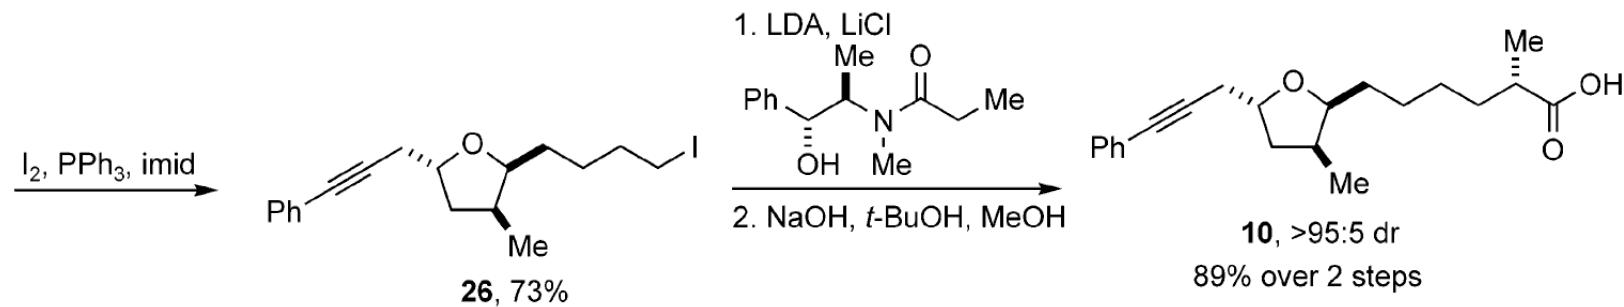

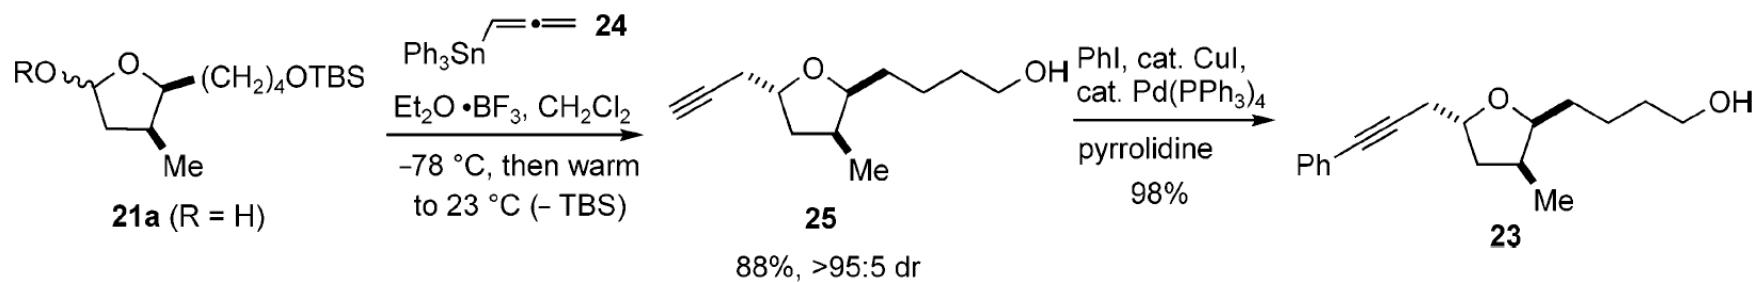

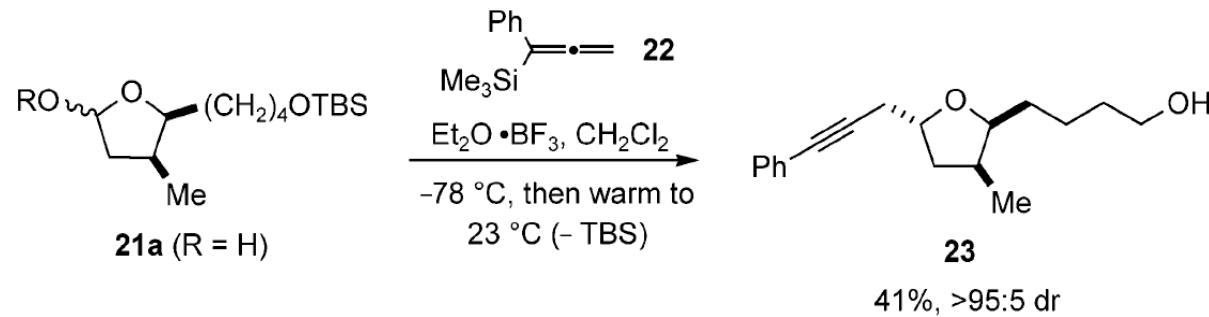

Assembly of Fragment 10

Woerpel's study of addition to oxocarbenium ion:

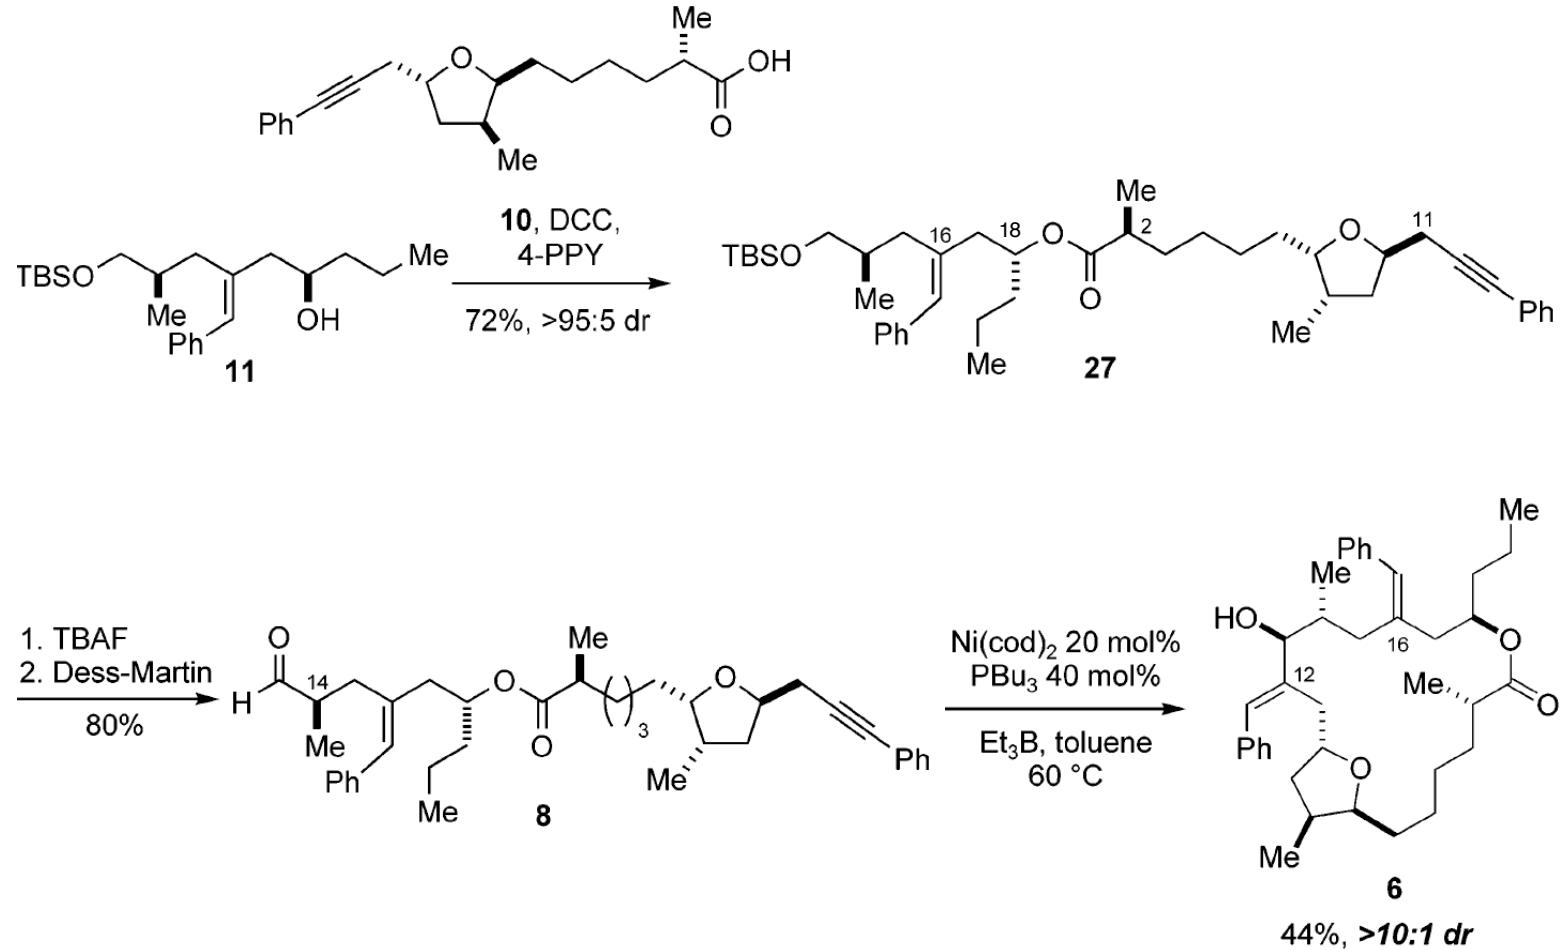

Synthesis of Alkynyl Acid 10

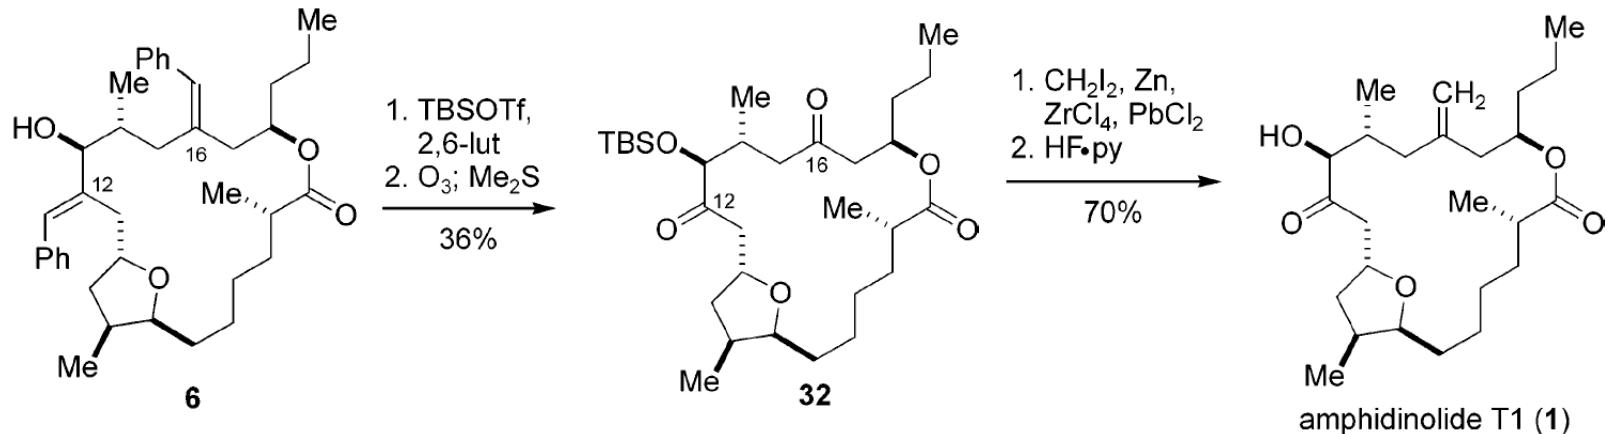

1. Colby, E. A.; O'Brien, K. C.; Jamison*, T. F. *J. Am. Chem. Soc.* **2004**, *126*, 998.

2. Myers, A. G.; Yang, B.H.; Chen, H.; McKinstry, L.; Kopecky, D. J.; Gleason, J. L. *J. Am. Chem. Soc.* **1997**, *119*, 6496.

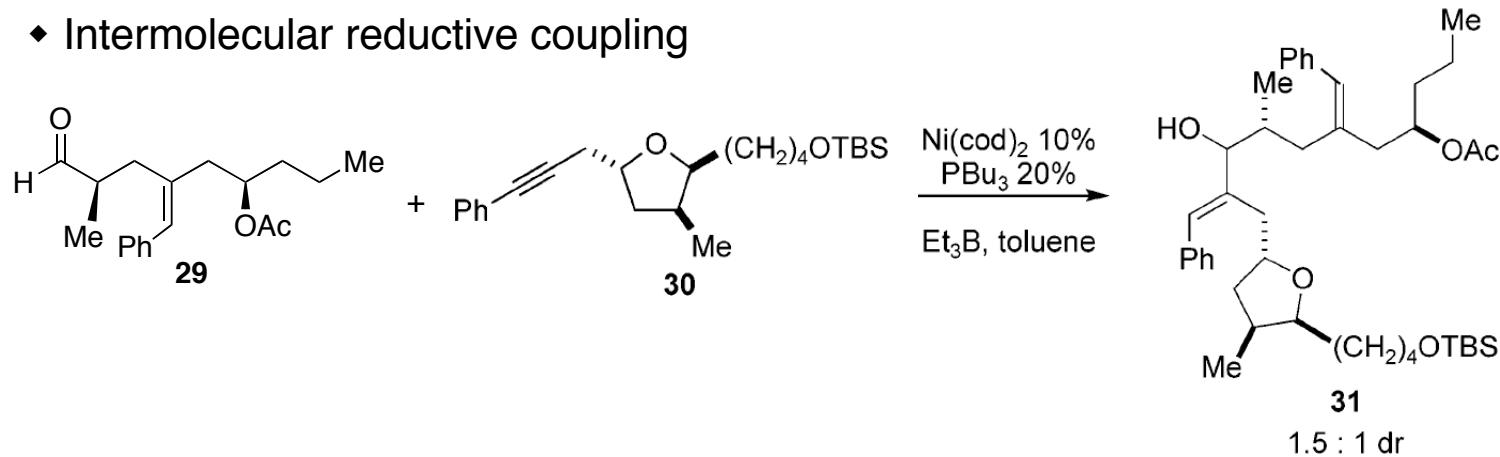

Ni-Catalyzed Macrocyclization

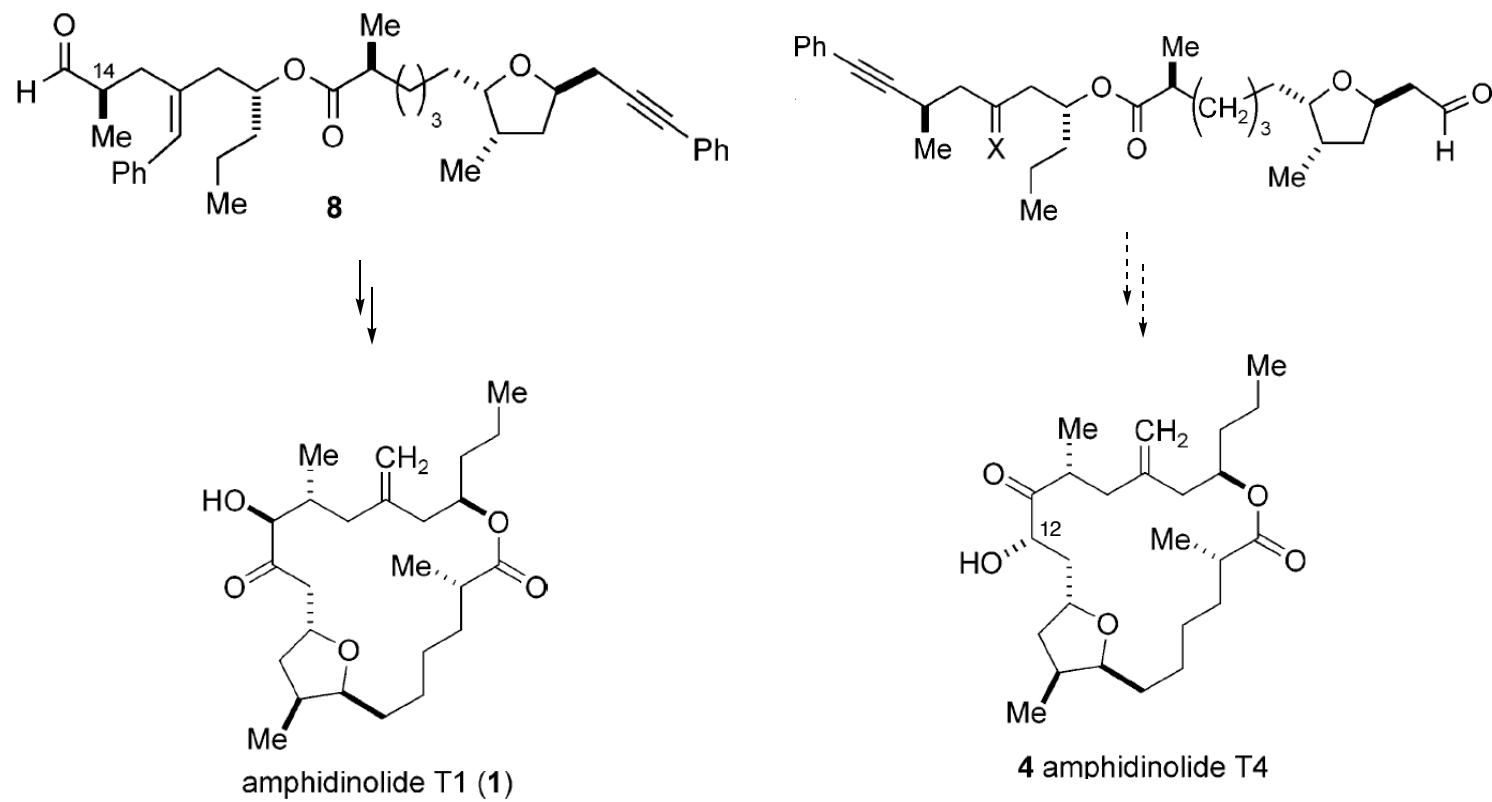

Synthesis of Amphidinolide T1

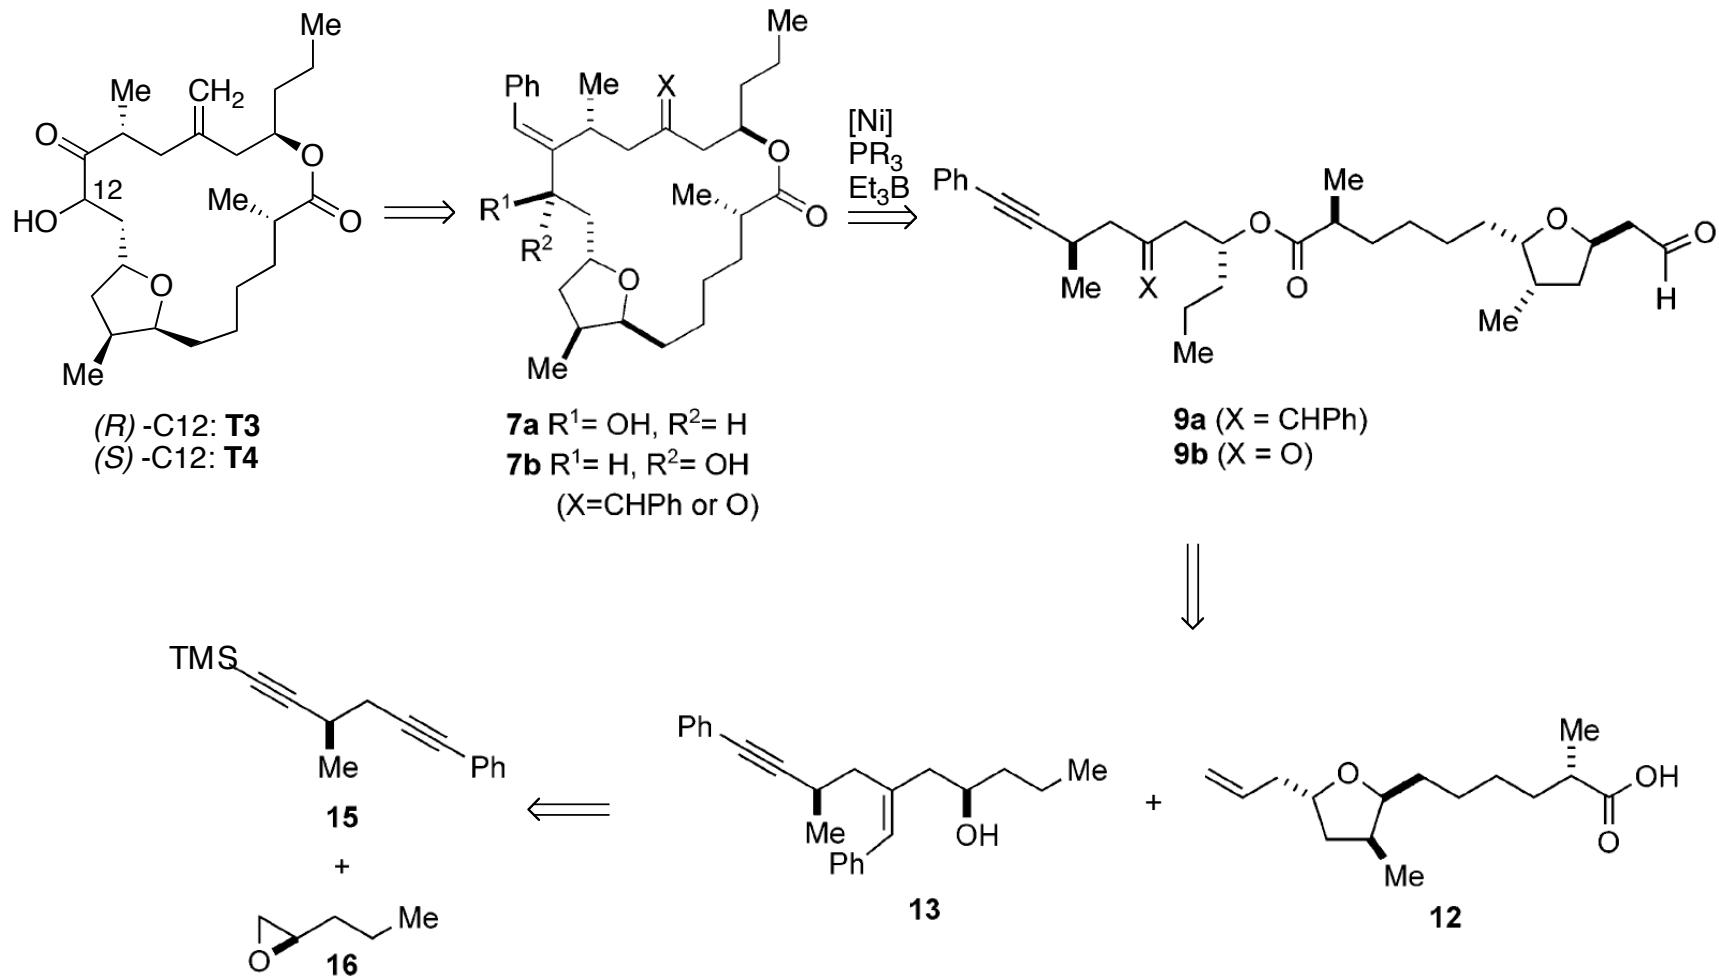

♦ Intermolecular reductive coupling

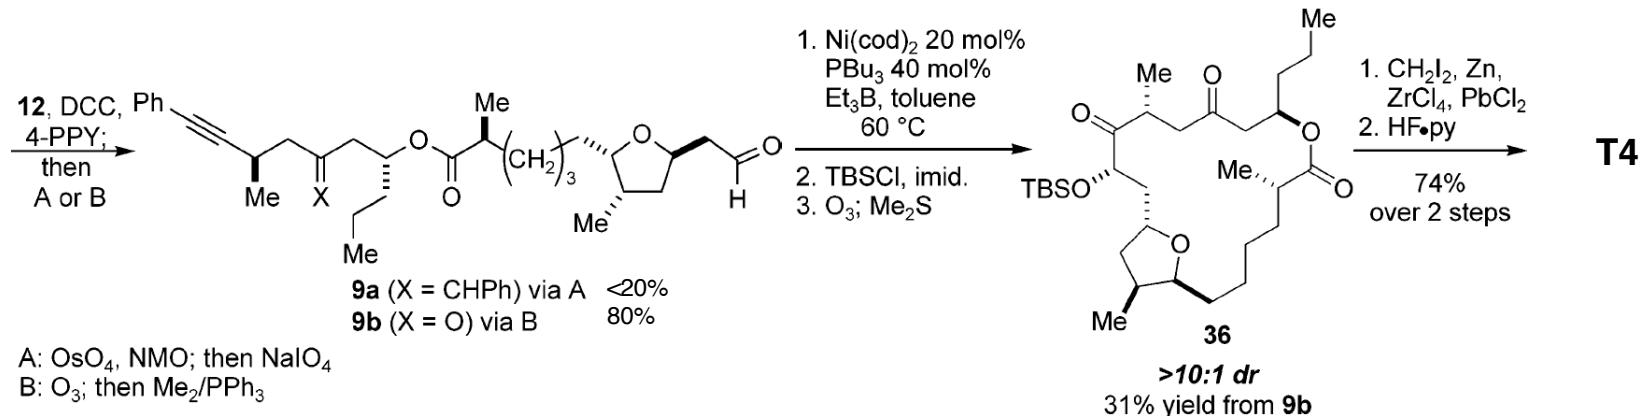

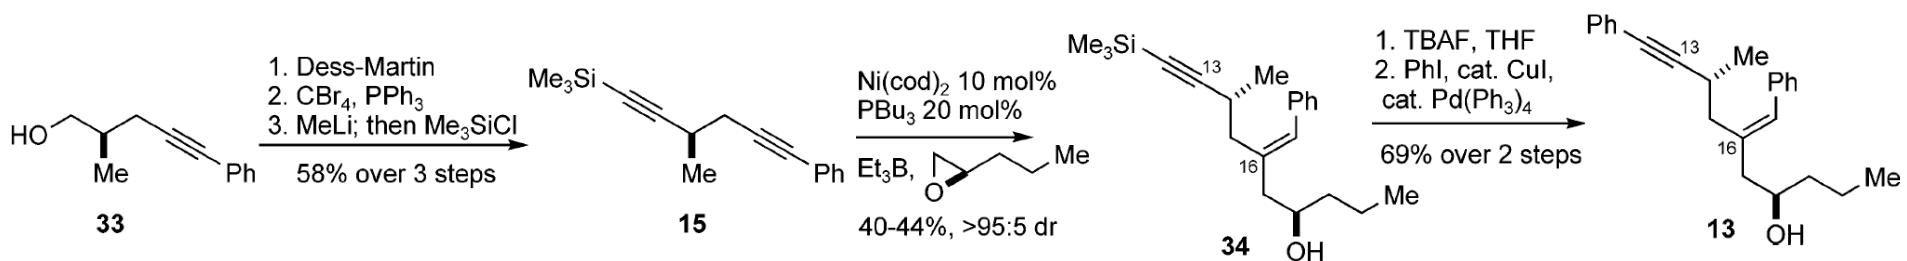

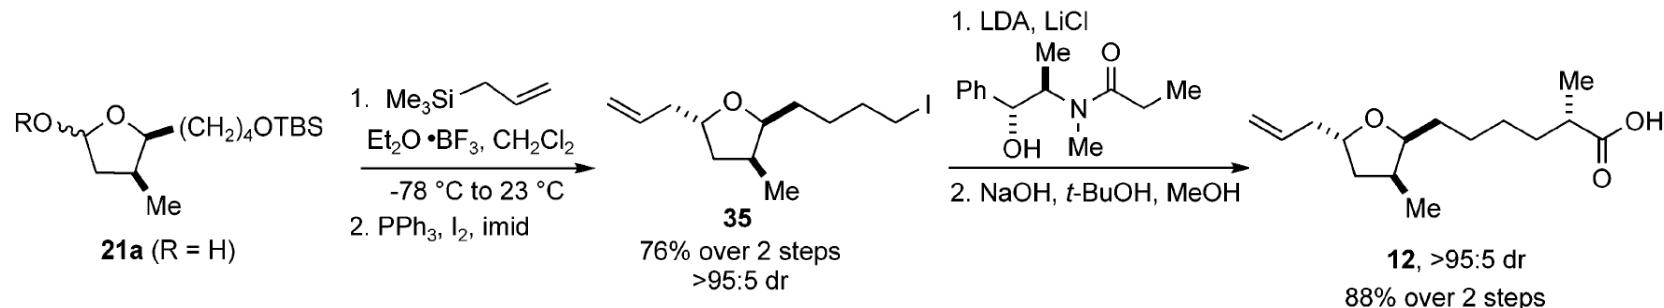

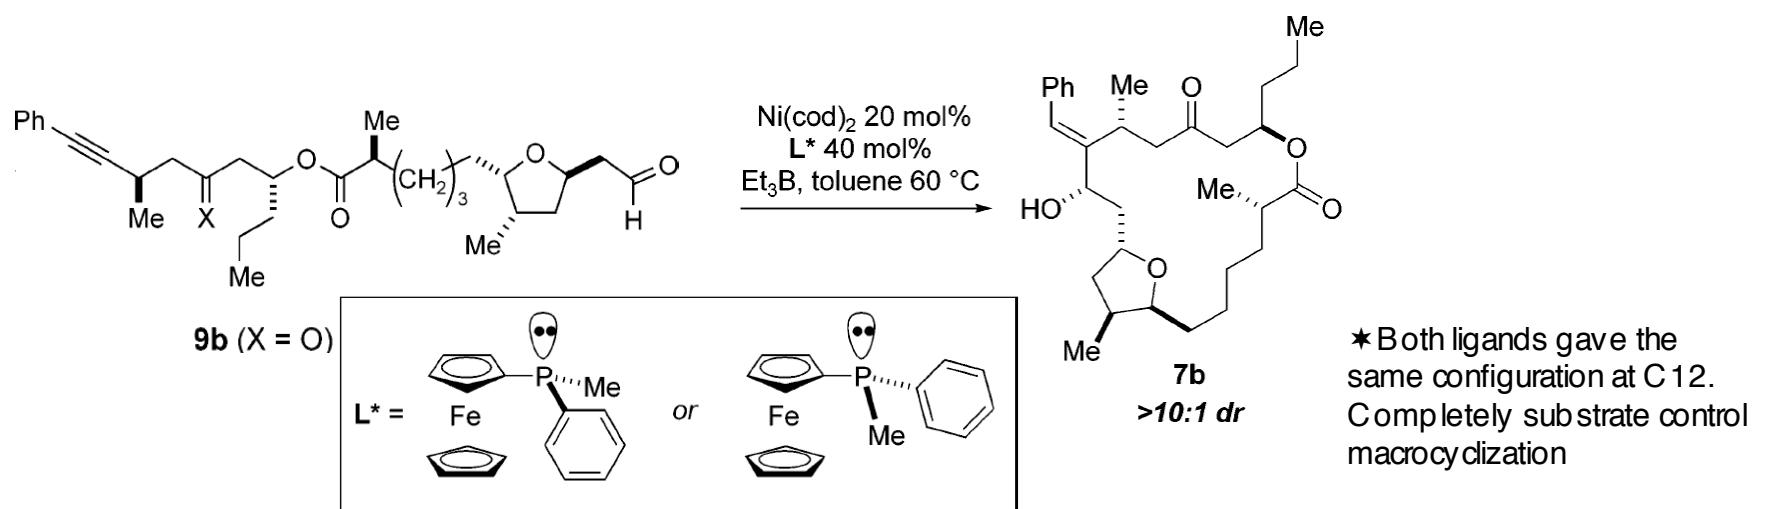

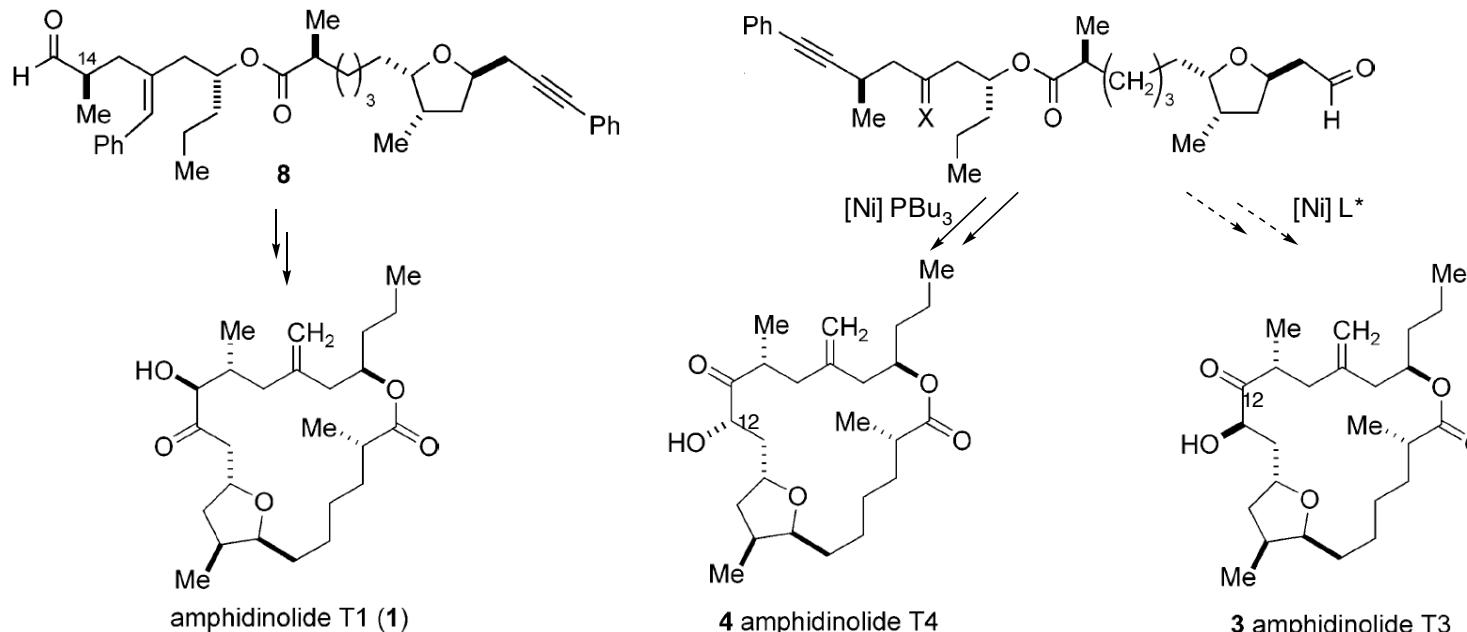

Retrosynthetic Analysis of Amphidinolide T4

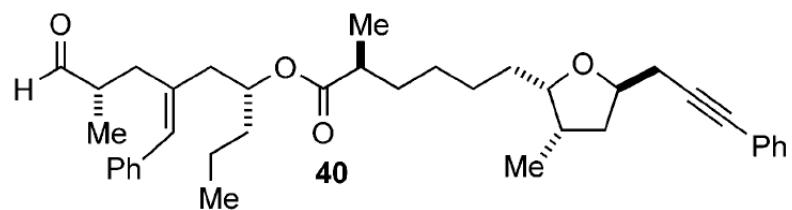

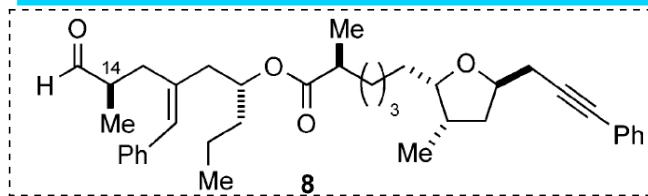

Synthesis of Amphidinolide T4

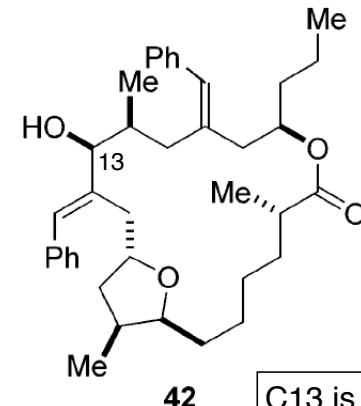

Possibility of the Synthesis of Amphidinolide T3 via Using Chiral Ligand

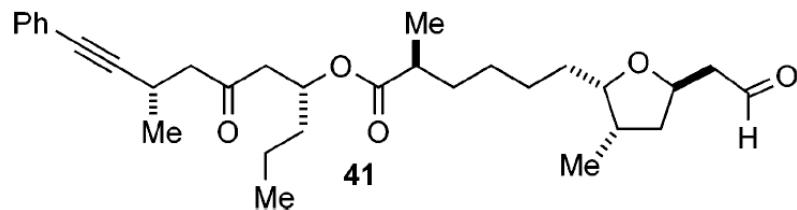

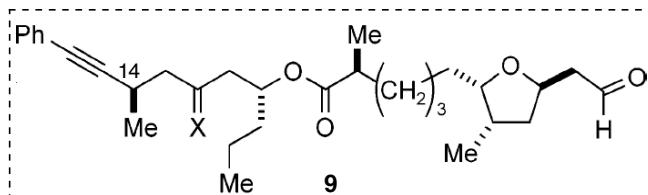

Inverted C14 Methyl Effect

$\text{Ni}(\text{cod})_2$ 20 mol%
 PBU_3 40 mol%
 Et_3B , toluene
 65°C

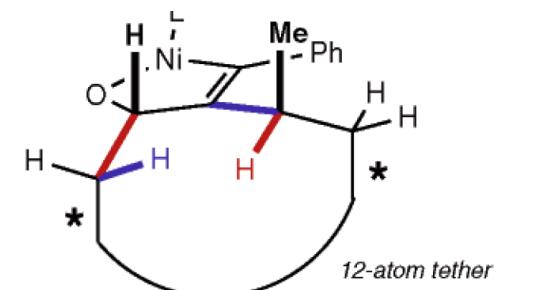

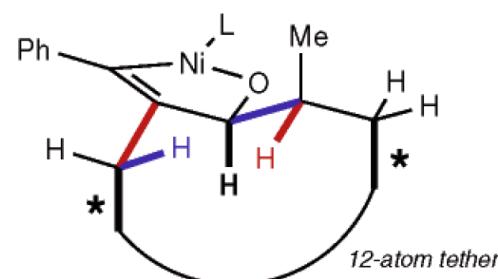

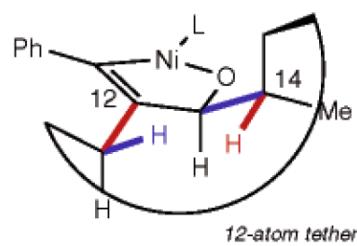

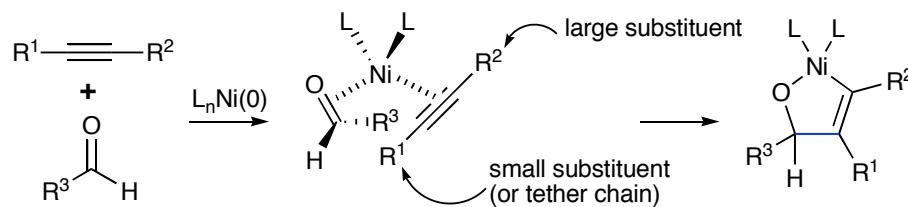

C13 is still (*S*)-
8:1 dr

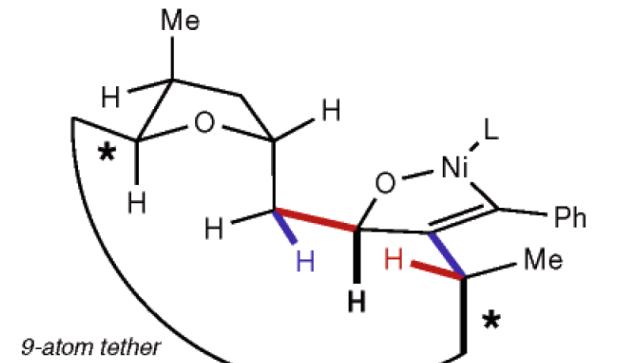

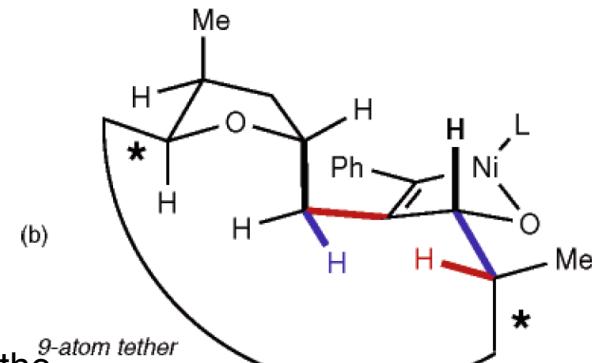

$\text{Ni}(\text{cod})_2$ 20 mol%
 PBU_3 40 mol%
 Et_3B , toluene
 65°C

no cyclization product
40% recovered **41**

Macrocyclization study

sp² hybridization at C12 eliminates **syn-pentane-like** interaction with any of the substituents at C14 in macrocyclizations leading to both T1 and 14-epi-T1.

* The strongest effect on the sense of induction is minimization of 1,3-interactions. Branching on C14 has no effect.

Conclusion

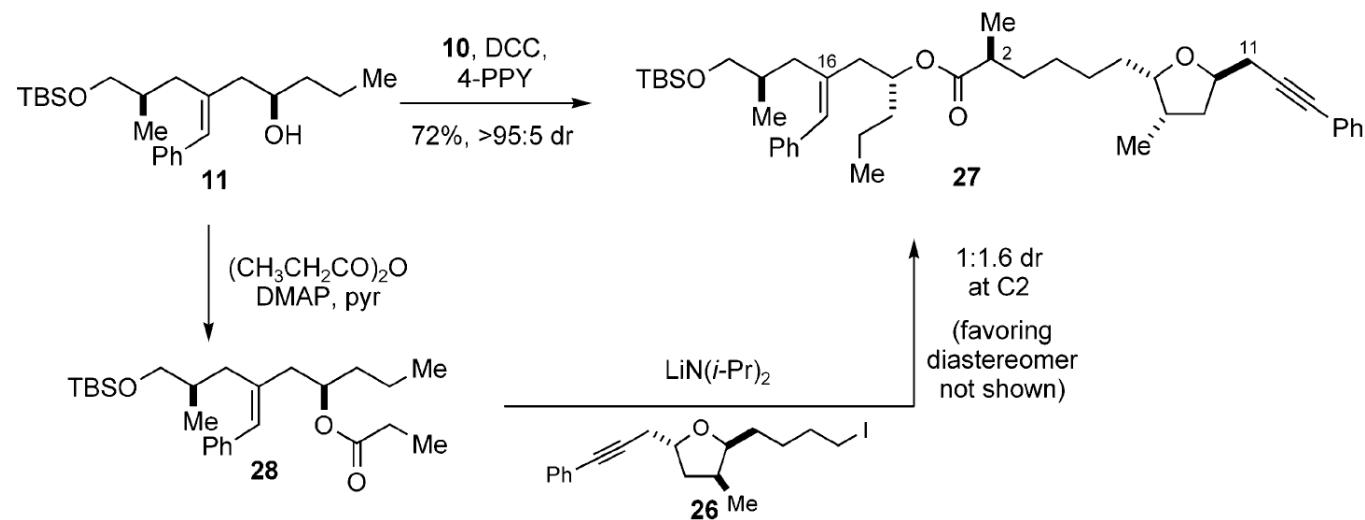

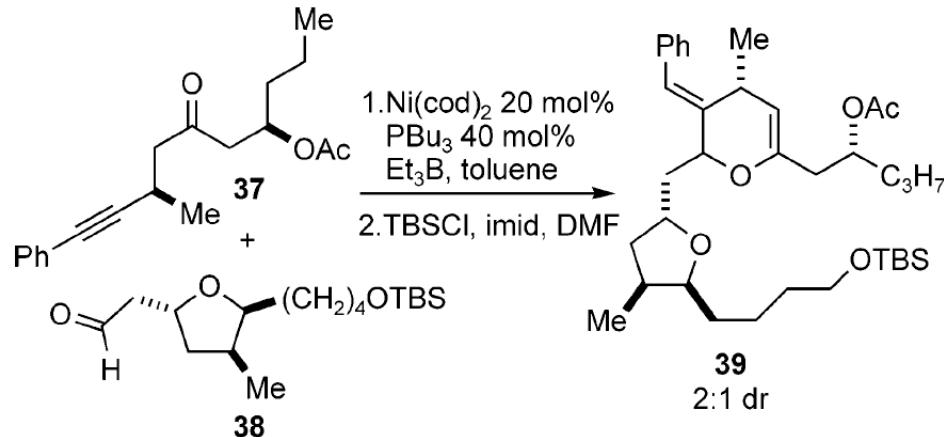

Synthesis of Amphidinolide T1 and T4:

1. Ni catalyzed macrocyclization not only closed the 19-membered ring but also concurrently install a stereogenic center.
2. Intermolecular Ni-catalyzed coupling gave the desired homoallylic alcohol.
3. Construction of the trisubstituted tetrahydrofuran via addition of oxocarbenium ion.
4. Jamison's synthesis of Amphidinolide T1: 15 longest linear steps.
T4: 14 longest linear steps.

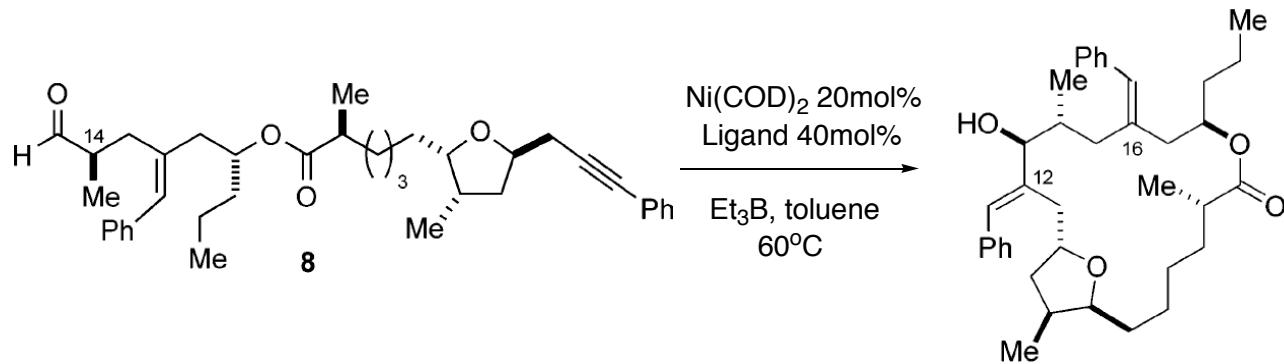

Ghosh's synthesis of T1: 18 longest linear steps.

Furstner's synthesis of T1 and T4: 21 longest linear steps.

Intermolecular coupling
